

HDPE SMOOTHWALL SUBDUCT WITH SLICKCORE

General information

Our HDPE Smoothwall subduct with SLICKCORE is a permanently pre-lubricated inner core subduct offers superior protection, low coefficient of friction, increases pathways of existing duct systems, allows extra channels for future cabling needs, and is ideal for cable installation using air blowing method.

Dura-Mine HDPE Smoothwall subduct with SLICKCORE is the ideal system for your telecommunication infrastructure.

Applications

Telecommunication, power, agriculture, construction & gas transmission

Features

- Available with SLICKCORE permanently pre-lubricated inner lining
- low coefficient of friction
- Immune to most corrosion or fungal contamination
- Flexible, even at temperatures well below zero
- Long life performance
- Size range from 20mm up to 75mm
- Various solid colors or stripes to fit customer requirement
- Packing in coil or drums with different lengths
- Pre-installed tape or rope with different strength (600N, 5KN or 8KN)
